AWS

📁 Projects

JUSTPRINTKARO

GitHub [🔗](#) | Deployed [🔗](#)

JustPrintkaro is a printing-based website where users can purchase different products or request their own customized designs.

This is a collaborative freelance project built with 1 other member and the website is currently being used by the client for their business.

Tech Stack - Reactjs, Redux, Ant Design, Nodejs, Expressjs, MongoDB

Features -

- Fully responsive design with smooth UI
- Database management using MongoDB

Areas of Responsibility -

- Built the admin panel for the website
- Worked on UI as well as integration of frontend and backend

HOSPITAL MANAGEMENT SYSTEM

GitHub [🔗](#) | Deployed [🔗](#)

HMS is an app that can be used for the management of a hospital. Tasks such as patient admission, report creation, booking appointments, and more can be done with the app.

It is a collaborative project developed with 2 other members and took 3 weeks to complete.

Tech Stack - Reactjs, Redux, Ant Design, MongoDB, Expressjs, Nodejs

Features -

- Frontend has a client-facing side and a separate dashboard for staff
- Backend has complete authentication and a secured database

Areas of Responsibility -

- Built the entire backend for the app
- Added authentication and error handling at every step

BLOGGER

GitHub [🔗](#) | Deployed [🔗](#)

Blogger is a blogging app where users can read blogs posted by other users or even create their own blogs.

It is an individual project and took 2 weeks to complete.

Tech Stack - Reactjs, Context API, SCSS, Expressjs, Nodejs, MySQL

Features -

- Relational database is used for storing and management of data
- Complete authentication and authorization using JWT

Areas of Responsibility -

- Built the entire website's UI using SCSS
- Used phpMyAdmin for creating and managing the database in MySQL
